Why choose Millboard?

Millboard is a premium and unique decking product. It is made from polyurethane and does not contain any timber fibres. Millboard offers the natural look of timber with additional benefits ensuring your decking is maintenance free and exceptionally durable.

- * Made using eco-friendly materials
- * Maintenance free - requires no upkeep
- * Highly anti-slip in the wet - R11 rating
- * Does not rot, splinter or warp
- * UV weather stable
- * Resistant to food and drink stains
- * Intricate natural woodgrain detail
- * Invisible 'lost head' fixing
- * Wide choice of designs and colours

Enhanced Grain - Golden Oak

...the new generation in decking

Hand-finished, intricate detail capturing the charm of real timber...

Millboards are moulded from prime oak samples, replicating the beautiful qualities of original timber. Each board is hand-finished to reproduce the detail of natural wood with minimum repetition.

The new generation

The textured and resilient surface of the Lastane™ finished Millboard is unique in that it provides a tough, algae-repellent surface which greatly enhances slip resistance in wet conditions to provide a safe, natural looking 'non-timber' decking board. Due to Millboard's non porous nature it needs little maintenance other than the occasional wash. It has a very stable composition and fade resistant finish ensuring a highly weather stable product, produced and finished to the highest standards. Millboard is well suited to the leisure industry including hotels, pubs, clubhouses, outdoor smoking facilities, as well as domestic use.

Sustainable

Made using a blend of recycled material that make use of hard-to-use waste and reclaimed natural minerals. The manufacture of Millboard helps to conserve the earths resources as well as reducing landfill, and helping conserve mature hardwood forests.

Enhanced Grain - Coppered Oak

Bullnose Step Edge - Enhanced Grain - Coppered Oak

Millboard Enhanced Grain Range			
Width (mm)	Thickness (mm)	Length (m)	Max Span (mm)
176	32	3.6	400

Millboard Weathered Range			
Width (mm)	Thickness (mm)	Length (m)	Max Span (mm)
200	32	3.6	400

Millboard bullnose step edge

With an integral half round nosing moulded on the edge, the bullnose step edge provides a clean finish for step situations or to neatly cap the edges of your decking area.

Fixing

Millboard 'lost head' top fixing is easy and simple, and best of all no screws or nails are visible after fixing. Just screw straight into the board to attach to your joists, no pre-drilling, counter sinking or fiddling with clips. The unique Lastane™ material closes back over the Millboard Trimhead fixing, leaving a virtually indistinguishable hole.
