

Windows - "One of the weakest links"

One of the biggest oversights for most home owners is the selection of windows, doors and glass for their home. It is now mandatory to insulate walls and ceilings but no real thought is put into the selection of windows and doors in the family home. Windows and doors represent one of the weakest links in most homes in Australia with up to 30% of heating and cooling going literally straight out the window.

“Up to 30% lost through windows and doors”

With the rising cost of gas and electricity home owners are looking to provide more energy efficient ways to keep the costs down. Nu-Eco's range of energy efficient windows and doors using double glazed insulated glass provide far better thermal efficiency than most available alternatives.

“Free thermal window assessment using a thermal imaging camera”

Nu-Eco Windows can provide you with a free thermal assessment of windows and doors to identify your homes weakest link and provide a solution that will not only save you money but increase the comfort levels of your home.

- ◆ Keep your Home Warm in winter and Cool in Summer
- ◆ Save \$\$\$ on Heating & Cooling Costs
- ◆ Reduce Noise by up to 80%
- ◆ Will not Rot or corrode
- ◆ Eco Friendly
- ◆ Never Paint
