

leva sequential range

These new products have been designed to compliment the Leva range for use in ensuites in the health and aged care markets. Offering user benefits over traditional single lever mixer type tapware in terms of ease of use, there are also benefits to your facility in the potential for energy savings and a reduced risk of legionella.

With consultation and feedback from the market Enware has designed our latest range of tapware to be easy to maintain and clean with a modern design. Suitable for all showers and most basin types (with the addition of a suitable spout or shower outlet also available separately from Enware).

The Sequential ceramic disc cartridge moves progressively from “off” to “full cold” to “mixed” to “full warm” all in a single anti-clockwise rotation without the need to lift, offering much easier control than traditional mixers for users with arthritic or mobility conditions.

As the tap does not draw any hot/warm water until the handle is moved to the mixed position, energy can be saved and potentially reduces risk of legionella by not drawing small amounts of warm/hot water into the pipework.

Installation is simple and unlike other single lever mixers some adjustability is offered with up to up to 25mm of depth variability. Spare parts are available and both products come with a 5 year warranty.

features

- Robust construction for superior performance
- Ergonomic sleek design
- Seamless single lever progressive mixing “Click” at off, Cold & Mixed positions
- Colour Indicators for Hot/Warm, Cold and Off
- Adjustable wall flange with o-ring seal, compact design - 50mm in-wall depth
